THEME:

Social Habitat for the Region

SUBTHEMES:

Urban Policy Frameworks & Regulation Reforms: Land Use & Secure Land Tenure

Urban policy frameworks are paramount in the administration, planning, development, and management of urban areas. Inclusive and equitable urban development policies on housing, socio-economic development, transportation, and environmental management foster sustainable urban development across diverse locations and populations. Urban regulation reforms ensure that the policies are effective, efficient, and, most of all, fair in their implementation with reference to zoning, building and housing, infrastructure, and environmental management, which promote perennial community participation.

Land Use and Secure Tenure denote the allocation of land for a purpose, accessibility, and rights of use. Comprehensive strategies on the utility of land for business, housing, social amenities, government administration, and conservation and preservation of natural environments should be employed for the benefit of all urban inhabitants across gender and socio-economic divides. The assurance of accessibility and residency on land positively contributes to improved urban living conditions for the population.

Building Technology for Social Habitat & Climate Resilient Housing

Building technology in design and construction cuts across sustainability in materials, energy, and water utilities, and technologies that mitigate climate disasters in the built environment. Practitioners in the Engineering fields must constantly innovate to create structures that withstand extreme weather conditions like floods, hurricanes, and heatwaves experienced across the region. Importantly, how can the next generation of practitioners be inspired to advance and implement resilient technologies that can withstand severe conditions that will be experienced in the future?

Innovative Financing Models

Housing financing is a critical determinant of housing availability, affordability, and adequacy, with the cost of financial facilities ultimately passed on to the final consumers. However, while historically

significant, traditional models for financing housing have often fallen short in addressing the acute needs of the growing population. These models have been burdened with high transaction costs, bureaucratic red tape, and stringent eligibility criteria, inadvertently contributing to the high cost of housing. The urgency of the immense housing needs posed by the burgeoning urban population in the developing world cannot be overstated. Innovative financing models that prioritize efficiency, flexibility, inclusion, affordability, and streamlined processes while minimizing overheads are not just a solution but a necessity.

Collaborative Partnerships/ Community Engagement & Participation

The provision of social housing is an intricate web of interconnected elements that demand a synergy among all stakeholders to address the housing challenges. These partnerships catalyze the co-creation of innovative solutions that address the multifaceted and specific challenges of housing. Community engagement forms the cornerstone of collaboration as communities are not just passive recipients of change but equal partners and active agents of their transformation. In addition, public-private partnerships are pivotal, as they leverage the strengths and resources of both sectors.

Gender Equality & Social Inclusion Housing

Housing is a fundamental human right and must be accessible to all, regardless of gender, age, abilities, ethnicity, or socio-economic status. However, like urbanization processes, the right to housing and services is often determined by gender, power, privilege, and discrimination. Housing projects must be engrained with inclusivity that transcends physical boundaries and fosters a sense of belonging for all. Progressive housing policies, land tenure security, and access to affordable housing finance are among the ways of empowering marginalized groups to claim their right to housing and fully participate in the social and economic life of their communities. Therefore, it is a collective responsibility to ensure that every individual has a safe and secure home, regardless of background.
